ARCADE DRAFT STARTER PACK · BY VISIONS

SET IT UP IN 5 MINUTES.

THREE COLOURWAYS

Cabinet · Grape Soda · Mint Token

Pick a colourway folder and use the files inside it. The steps are the same in OBS Studio and Streamlabs Desktop. Every piece is at the size the platform asks for.

1 STARTING SOON SCREEN

Make a scene for it, add a **Media Source** and choose `starting-soon/starting-soon.mp4`. Tick **Loop**: the 10-second clip loops without a jump. Use `starting-soon.png` if you want a still.

2 WEBCAM FRAME

Add an **Image** source with `webcam/webcam-frame-16x9.png` (or `4x3`) and keep it **above** your camera in the source list. Resize your camera to fill the cut-out: 640 × 360 for 16:9, 480 × 360 for 4:3, at 1080p. For the animated one, add `webcam-frame-16x9.webm` as a **Media Source** instead and tick **Loop**.

3 FOLLOW ALERT

In Streamlabs or StreamElements, open your follow alert. Upload `follow-alert/follow-alert-silent.webm` as the image or video, and `follow-alert-sound.wav` as the sound. Set it to 6 seconds, the font to **Bungee**, and put the name text over the middle of the ticket. `follow-alert.webm` has the sound built in, for other tools.

4 PANELS

On your Twitch channel page, open **About** and turn on **Edit Panels**. Add an image panel for each file in `panels/`. They're 320 px wide, the width Twitch uses. The blank one takes any title you write over it.

WANT IT TO BE ALL YOURS?

Your colours, your name, a matching logo and the rest of the alerts. That's what we do, for streamers and creators.

VISIONSTHESTUDIO.COM/STREAMERS

Free for your own channel and stream, on any platform. Please don't resell or share the files themselves. Credit to Visions is appreciated, never required.
